Document Compliance Management

Today, there is a definite tendency for sensitive business information to travel beyond company boundaries. This is generally not due to it falling into the wrong hands. Rather, work on sensitive data and documents usually involves third parties like consultants, lawyers and partners. Many common security measures only address a small part of the challenge, such as encryption during data transmission and on storage media, or enterprise-wide digital rights management systems. This is where Document Compliance Management (DCM) comes in. DCM looks at the whole information protection issue in a holistic and integrated way. It is ideally suited to the way businesses operate today with their extensive use of extranets.

Brainloop, based in Boston and Munich, is the leading provider of software solutions for high-security collaboration and distribution of confidential documents across multiple companies. Brainloop's customers use the Brainloop Secure Dataroom to meet key compliance and risk management requirements. These typically arise during communications with external committees; within legal,

financial and R&D departments; and in any other situation where confidential documents need to be sent to authorized people inside and outside the firewall.

End-to-end protection for confidential documents

The Brainloop Secure Dataroom is a web-based, virtual safe containing documents that can only be viewed and edited by authorized users. The data room is based on a security concept that delivers complete protection against unauthorized access. It also provides a tamper-proof audit trail which ensures that every activity is recorded and traceable. Brainloop Secure Dataroom customers use the solution to work on sensitive processes that involve other companies. For example, they rely on it as a virtual deal room during M&A transactions and for confidential, traceable communications with customers and partners.

FAST FACTS

SELECTED PARTNERS

AIS Management, Hewlett Packard, Finanz Informatik Technologie Service (formerly IZB), ProSystems, ELCA Informatique, Microsoft, RaaS, T-Systems Business Services

OFFICES

Boston (USA), Munich (Germany)

Today's stringent corporate governance and compliance regulations compel companies to ensure that confidential data is adequately protected and that every access to their information is traceable. This is particularly important for M&A documents, internal strategy papers, and quarterly and annual financial reports. As a result, governance and accountability rules are an additional reason for companies to optimize their IT security, leading to an increase in demand for security solutions like the Brainloop Secure Dataroom.

The Licensing Model: Rent or Buy

The Brainloop Secure Dataroom offers the option of buying licenses in the traditional way, or using the solution as an on-demand service. The solution is hosted in high-security data centers in Europe and North America with centralized data protection.

The service is particularly cost-effective for customers because they pay for their actual usage of the system. In addition, hardware and infrastructure investments and running costs are unnecessary. Legal, M&A and other projects can be set up on very short notice. Using their web browser, attorneys, clients and others can work on and share confidential documents – anytime and anywhere. They can always be sure that the solution provides the highest levels of security; two-factor authentication; 256-bit encryption, and a complete record of all activity undertaken in the dataroom.

THE BENEFITS

Easy and secure communication

- › Web-based access from anywhere
- › No installation necessary on the desktop
- › Platform independent
- › Encrypted storage and transmission of documents

Compliance with audit requirements

- › Tamper-proof audit trail of all activity in the dataroom
- › Version labeling with Brainmark and Fingerprint

Collaboration platform

- › Project documents stored together
- › Automatic version management

Protection of confidential documents

- › Secure two-factor authentication for access control
- › Access to documents exclusively for authorized users
- › Implementation of company-internal security policies
- › Protection from access by internal or external IT staff
