

## ON-DEMAND SOLUTION GIVES INSURANCE COMPANY A STRATEGIC PLATFORM FOR SHARING ASSET AND PORTFOLIO INFORMATION

### Brainloop Secures Confidential Data at Janitos Versicherung

Boston, June 24, 2008

Brainloop AG, a leading provider of software solutions for sharing strictly confidential information across the extended enterprise, today announced that its Secure Dataroom solution has been deployed by Janitos Versicherung AG, a German-based insurance company. Janitos is using the Brainloop on-demand solution as a strategic platform for sharing asset data with its self-employed insurance brokers. Janitos selected Brainloop's solution as it complied with all relevant security standards and fulfilled all functional requirements. An additional reason for the choice was that, as a software-as-a-service (SaaS) solution, it could be implemented immediately. As a result, the need for client software installation and time-consuming user training was eliminated.

Janitos now handles a range of confidential communication processes via the Brainloop dataroom. These include sharing confidential customer information and sales commission accounting with its external insurance brokers. In addition, Janitos imports files on damages claims into the dataroom from SAP Workflow and makes them available to brokers in a secure environment. It also uses the solution to place orders with external service partners. Janitos was looking for a solution offering the highest security standards, rapid implementation, thorough documentation of all communications, and no need for up-front investment. The company also required an interface to its internal SAP systems to underpin its day-to-day automated data transfer and synchronization processes.

"With Brainloop Secure Dataroom, we have deployed a secure solution that makes it much simpler to transfer confidential asset information to our external insurance brokers," comments Christian Moser, IT division manager at Janitos Versicherung AG. "In the future, we also plan to use the Secure Dataroom to handle sales commission invoicing. The system documents each step of the information sharing process, while ensuring the transparency and traceability of all communications. "The same applies to the information we share with our external service and outsourcing partners, as we have also started providing them with confidential contract information within the dataroom."

The Secure Dataroom software is designed with comprehensive security features that include an encrypted filing system in the virtual dataroom. In addition, uploads and downloads of data room content are protected by 128-bit encryption, while all content on the data room server itself is secured with strong, 256-bit encryption. Customers can also benefit from additional security features with two-factor authentication. This requires the user to enter a password as well as information from a token, such as a chip card or mobile phone with a one-time key provided by SMS. Alongside secure and confidential communication, the Brainloop Secure Dataroom also delivers a tamper-proof report of the entire information flow in the form of an integrated audit trail.

Once a project has been completed, the data room content is archived along with the audit trail.

## ABOUT BRAINLOOP

Brainloop is the leading provider of infrastructure and solutions for managing confidential documents. Brainloop's customers achieve important risk-management and compliance objectives by deploying Brainloop Secure Dataroom for boardroom communications, financial reporting, strategic projects and all situations where confidential documents need to be available to authorized users inside and outside the firewall yet protected from unauthorized access.

Brainloop Secure Dataroom is used around the world in hundreds of leading organizations, including BMW, Deutsche Telekom, Eurocopter, Galileo Industries and ThyssenKrupp. Leading legal and financial services companies deploy the Brainloop solution throughout the complete M&A lifecycle. Strategic Partners include Hewlett Packard, IZB, Microsoft and T-Systems Business Services. Brainloop has offices in Boston, MA and Munich, Germany. <http://www.brainloop.com>
