

DATA SHEET | MyRoom

Secure Document sharing inside and outside your company

Brainloop MyRoom delivers efficient document sharing and proven security from the providers of the Brainloop Secure Dataroom, the solution for secure collaboration on highly confidential documents.

Leading companies listed on the Swiss Market Index, DAX30, ATX and Euronext rely on this security standard, which is now available to every employee who needs to share confidential data. It allows companies to ensure that their business-critical information does not fall into the wrong hands and that they are meeting compliance requirements.

BENEFITS

- > Intuitive and easy to use
- > Secure storage
- > Transfer of large data volumes
- > Implementation of corporate policies
- > Auditing to ensure compliance with corporate policies
- > Made in Germany, hosted in Germany
- > Proven security based on 17 years' experience
- > 24/7 support (by phone and email, in English and German, for all users)

USE CASES

- > Secure personal file storage
- > Secure storage for teams
- > Secure way of sending documents to external users via a link and two-factor authentication
- > Secure document transfer by external users

HIGHEST LEVEL OF SECURITY

- > Provider and administrator shielding
- > Two-factor authentication
- > Role-based allocation of rights
- > Data storage in redundant, ISO 27001 certified datacentres
- > ISO-certified operation by the Brainloop operation team
- > 256-bit AES-GCM encryption on the server, mobile apps and desktop clients as well as 256-bit SSL/TLS 1.2 during data transmission
- > Operation compliant with the German Federal Data Protection Act; contract data processing agreements are standard
- > Regular audits of the solution by external inspectors

ADMINISTRATION AND IMPLEMENTATION OF CORPORATE POLICIES

Login-Security

Multi-factor authentication by email, one-time PIN code via SMS or Brainloop Authenticator

Mobile device management

Automatic reset if a user types in the wrong authentication code 3 times, exclusion of manipulated devices (jail-broken, rooted), mandatory local access code, app auto-lock, requirement for regular authentication with the server

Audit with double checking (optional)

If an administrator suspects that a Brainloop MyRoom user has not adhered to the compliance rules, he/she can initiate an audit with a double check. This involves the administrator inviting an auditor to view the metadata and content (optional) of the suspicious account.

Centralised administration

Central user management, definition of global policies, (e.g. validity period of one-time PIN codes), login policies (e.g. use of two-factor authentication, password strength, password process, password history etc.), management of approval security

Brainloop Authenticator

The Brainloop Authenticator is an authentication option based on the TOTP standard and works online as well as offline. In online usage, this Brainloop login process is more convenient than third-party apps as users do not need to bother with typing in the one-time access code required by the server.

Enterprise integration

Active Directory integration, silent roll-out of Windows client for MyRoom and automatic update with no administrator rights

SIMPLE AND SECURE DOCUMENT APPROVALS, ANY TIME AND ANYWHERE

> Platform-independent access

Browser-based with no need for plug-ins

> Desktop integration (optional)

The Windows client is seamlessly integrated with Windows Explorer, including encrypted local data storage (dedicated drive). Offline operation also available

> Integration in Microsoft Outlook (optional)

Documents and folders can be sent out as a link

> Sending documents securely

Links can be protected with a one-time PIN code (sent by email or SMS), password and expiry date. Access approvals and links can be withdrawn at any time

> Notification by email of changes made by other people

> Access approvals for folders

Folders can be made available to people based on their role (editor / reader / co-owner) – protection available by one-time PIN code and expiry date

> Synchronisation

Automatic synchronisation across all clients

> Auto-versioning

Automatic versioning when an existing document is uploaded again

> Document history

Traceability of all document-related activities

> Mobile devices

Apps for Android, Windows and Apple tablets as well as smartphones, includes encrypted data storage

> Custom branding

Customisable user interface and URL
